

# Muhammad Aziq Rauf

+92.310.999.9217 | muhammadaaziq179@gmail.com | aaziy | LinkedIn | Islamabad, Pakistan

## EDUCATION

### FAST-NUCES (National University of Computer and Emerging Sciences)

2026

Bachelor of Science in Software Engineering

Islamabad, PK

- **Core Coursework:** Data Structures, Algorithms, Artificial Intelligence, Machine Learning, Deep Learning
- **Awards & Certifications:** Top 5% nationally in HEC National Skill Competency Test (NSCT); IBM AI Engineering Professional Certificate

## EXPERIENCE

### Cloudtek

June 2025 – Aug. 2025

AI Developer Intern

Islamabad, PK

- Developed and integrated AI-driven TensorFlow models into user-facing web interfaces for production.
- Collaborated with cross-functional teams to clean and preprocess complex datasets for machine learning pipelines.

## SKILLS

**Languages :** Python, JavaScript, C++, Java, SQL

**ML & AI Frameworks :** Llama 3.1, Scikit, Keras, NLP, LangChain, Hugging Face, RAG, Computer Vision

**Tools & Infrastructure :** Docker, MLflow, AWS Academy, GCP, PostgreSQL, Git, GitHub Actions, Next.js

## PROJECTS

### Q&Ace: Multimodal AI Interview Coach | Python, Llama 3.1, LoRA, React, Whisper

[GitHub](#) | [Live Demo](#)

- Engineered a multimodal system using FER, Whisper, and Llama 3.1 (with LoRA fine-tuning) for simultaneous facial, voice, and text analysis.
- Optimized inference latency via asynchronous processing, enabling concurrent execution of 3 distinct models without UI lag.

### Sentinel Support | Next.js, TypeScript, FastAPI, LangChain, Pinecone

[GitHub](#) | [Live Demo](#)

- Built a full-stack AI customer support platform featuring a user help center, an admin command center, and a LangChain/Pinecone RAG pipeline.
- Developed an autonomous AI agent to handle queries, auto-draft contextual responses, and intelligently escalate complex issues to human agents.

### AegisVision: Real-Time Traffic Monitoring | YOLO26n, ONNX, ByteTrack

[GitHub](#) | [Live Demo](#)

- Benchmarked YOLO26n vs RT-DETRv2, achieving 47 FPS at 1080p on Apple Silicon via CoreML EP; exported a unified ONNX model deployable seamlessly across Mac and Linux/ARM64 Docker environments.
- Implemented vehicle tracking (ByteTrack) and a bidirectional line-crossing counter with per-class tallies, validating accuracy on manually labeled datasets.

### PhoenixML: Automated MLOps Fraud Detection | Python, MLflow, FastAPI

[GitHub](#)

- Automated an end-to-end retraining pipeline using Evidently for drift detection; triggers MLflow Staging registration and gates Production promotion behind human review.
- Served a fraud detection model (PR-AUC 0.84 on highly imbalanced data) via Dockerized FastAPI on GHCR, backed by robust CI with 36 pytest unit tests.

## PUBLICATIONS & LEADERSHIP

### SciNex Journal of Advanced Sciences | Co-Author

2025

- Co-authored and published a computational study analyzing plant physiological parameters.

### Hackathons & Extracurriculars | Team Lead / Member

- **Leadership & Involvement:** Led a 4-person team at the NUST Hackathon (Feb 2026); active member of the Software Engineering Society (NASCON '24).
